Made of nature and nothing else

The company

Pasta Lori is a reality founded by a family company operating for over thirty years in the cereal, miller and pasta maker sector.

The **Loizzo** family has created a product of high quality appreciated and well known all over the world becoming a leading company in the sector thanks also to an attentive customer care.

Pasta Bio Lori was born from the desire to create an innovative product with the highest quality standards. Since **1997**, with a great effort and foresight, the Loizzo family carried out this project, creating an assortment of about twenty organic pasta shapes, **using only 100% Italian organic wheat from Apulia and Basilicata.**

EATING ORGANIC IS EATING HEALTHY, NOT JUST FOR YOUR HEALTH BUT ALSO FOR THE PROTECTION OF THE ENVIRONMENT.

Raw materials for the pasta

The importance of raw materials

The partnership with the agricultural supply chain allows to select the **top quality** blend. The choice of raw materials has always been a prerogative of the company which carefully selects only the best wheat from controlled and certified **organic crops** in **Apulia and Basilicata**.

Once the wheat arrives in the company, it is subjected to further checks by our Laboratory which verifies its substantial properties (proteins, ashes, humidity, absence of pesticides) with the aim of ensuring an excellent product not only in taste but also in well being.

The added value of our organic pasta, appreciated in the whole world, is given by the yellow color index never lower than twenty-five, which proves an important contribution of antioxidants, by the calibrated grain size and by the greatest elasticity for the gluten.

High standards that identify our production.

100% ITALIAN WHEAT

Pasta Bio Lori in the world

Our pasta is appreciated throughout Italy especially in the collective catering channel: its protein properties give it a consistency such as **to remain unchanged even in the conveyed.**

The success of **Pasta Lori** has gone beyond the Italian borders establishing itself in over **eighty countries around the world** as a leading company in the production of quality pasta.

100% ITALIAN WHEAT

Mill and Pasta Factory from Apulia and Basilicata

The advantages of transformation in the integrated supply chain

The integration between the first and second transformation in a single production site, that is the production of semolina dedicated to pasta making and the Direct transfer of the semolina from the mill to the annexed pasta factory generates multiple advantages in different processes:

- General programming;
- Continuity of supply;
- Guarantee of Constant and homogeneous quality;
- Control from the grain to the finished product;
- Reduction of time and costs of logistic and administrative operations;
- Reduction of transaction costs;
- Reduction of stocks and increasing of the shelf Life for the distributor.

The Matera plant occupies a total area of 65,000 square meters.

Mill:

- 58.000.000 kg/year durum wheat grinding;
- 42.000.000 kg/year production semolina.

Pasta Factory:

- 16.000.000 kg/year long shape pasta;
- 7.000.000 kg/year short hape pasta.

100% ITALIAN WHEAT

Eco-sustainability

A concept that makes the company great.

The company has always had the objective of safeguarding the environment, the prerogative of a future of health.

While looking at progress, **Pasta Lori** preserves the values of tradition in order to be able to offer a unique, innovative but above all high quality product.

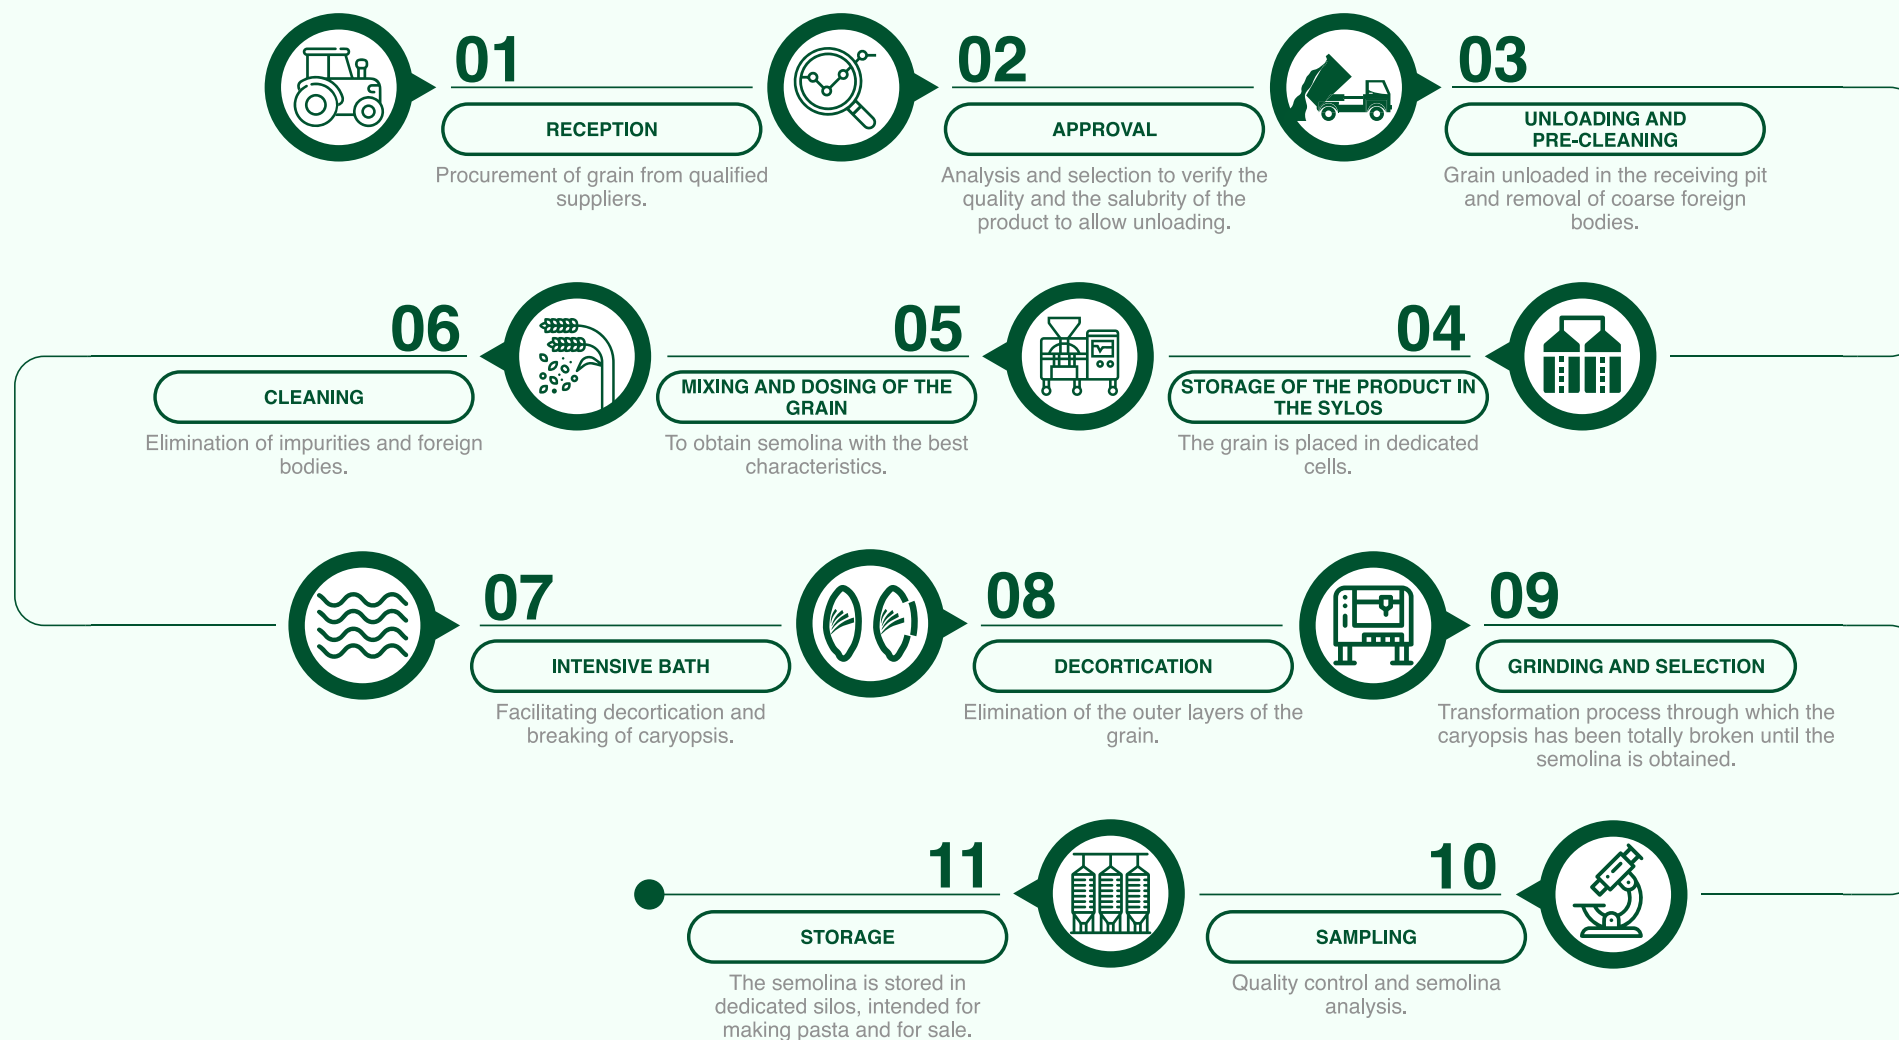

The concept of **eco-sustainability** is declined on several levels: from the installation of photovoltaic panels for the production of green electricity in self-consumption, to the collaboration with local agricultural producers guaranteeing a **short supply chain** and **zero km production**.

Great attention is also paid to packaging, limiting the use of plastic materials in favor of **eco-sustainable and plastic-free packaging**.

The advantages of sustainable packaging

Why choose sustainable packaging?

- To reduce the weight and volume of packaging to the minimum necessary to guarantee a high level of safety and hygiene to protect the consumer;
- To limit CO² emissions both in the production phase and then in disposal;
- To promote a circular economy model capable of limiting the expenditure of materials and energy by minimizing waste and losses.

Our products
